The tree generator

language: Python 3

Here comes the day of the big bath!

But before that, you'll have to go through the foot bath. The goal of the project is to realize a tree with different levels given in parameters.

[illegible]

2 Functions

Terminal

```
$>def trunck(size) :
```

This function should be used to calculate and display the trunk of the tree.

Terminal

```
$>def leaves() :
```

This function allows the calculation and the complete display of the leaves !

The function will be called several times by your program
